INTRODUCTION

This booklet contains separate listings of the trainees and fellows supported through grants and awards made by the National Institute of Dental Research from FY 1981 funds and trained during 1982.

Its primary purpose is to aid administrators and investigators in identifying and locating young scientific talent that may be recruited for programs or careers in dental research.

There are two computer listings for each of the training and fellowship programs. The first contains an alphabetical listing of the trainees with the scientific discipline. The second listing is arranged alphabetically according to the scientific discipline or field for which the training grant or fellowship award was provided. Secondary areas and fields or training, as found in NIDR document files, appear above each trainee's or fellow's name. That space was left blank, however, if the secondary discipline was the same as shown in the alphabetic column.

A third compilation for each program is the names and research interest of those awarded in FY 1981.

The program director or sponsor whose name and address is given in the listing should be contacted for additional or more up-to-date information on any of the individuals for which there is an interest. NIDR program staff is always ready to respond to inquiries, but it is preferable in this case to consult the program director.

The data in this publication were compiled by the Research Data and Management Information Section, Office of Planning, Evaluation and Communication.
